LimeNET Access in conjunction with Vodafone CrowdCell radio access products turns devices into cloud servers and makes it possible to access and manage content anywhere, without the need for traditional cloud infrastructure, ensuring reliable and secure access on-platform, at reduced cost.

How it works

LimeNET Access private cloud application is a microservice-based platform that turns each CrowdCell enabled network into a decentralised cloud, enabling efficient media access control and sharing. It is the perfect solution for enterprise customers requiring a scalable media and data sharing platform, without costly and complex to manage infrastructure.

Benefit to Enterprise customers

Always in control: content is directly shared without using the Internet or uploading to third party infrastructure.

Share with confidence: share digital content without uploading to external servers. Content remains on your device and/or CrowdCell, hence security processes are simplified.

Features

LimeNET Access is a convenient and differentiated experience, accessible from any device, anywhere.

CrowdCell private cloud

CrowdCell content to all devices

CrowdCell all media access

CrowdCell security cameras

CrowdCell screen sharing & casting

CrowdCell secure Enterprise cloud

Experience the power of LimeNET Access on Vodafone CrowdCell

- deliver a unique personal cloud service and increase customer engagement.
- allow access to content across all devices to browse and play content in original quality without over-burdening the network.
